R Markdown

```r
library(readr)
iris <- read_csv("iris.csv", col_names = F)
```

```
## Rows: 150 Columns: 5
## -- Column specification -----------------------------------------------------
## Delimiter: ","
## chr (1): X5
## dbl (4): X1, X2, X3, X4
##
## i Use `spec()` to retrieve the full column specification for this data.
## i Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

```r
colnames(iris) <- c('Sepal.Length', 'Sepal.Width', 'Petal.Length', 'Petal.Width', 'Class')

sapply(iris, class)
```

```
## Sepal.Length  Sepal.Width Petal.Length  Petal.Width        Class
##    "numeric"    "numeric"    "numeric"    "numeric"  "character"
```

```r
iris$Class <- as.factor(iris$Class)
sapply(iris, class)
```

```
## Sepal.Length  Sepal.Width Petal.Length  Petal.Width        Class
##    "numeric"    "numeric"    "numeric"    "numeric"     "factor"
```

```r
library(dplyr)
```

```
##
## Attaching package: 'dplyr'
##
## The following objects are masked from 'package:stats':
##
##     filter, lag
##
## The following objects are masked from 'package:base':
##
##     intersect, setdiff, setequal, union
```

```r
iris %>% group_by(Class) %>% summarize( Min.Sepal.Length = min(Sepal.Length, na.rm=T),
                                        Max.Sepal.Length = max(Sepal.Length, na.rm=T),
                                        Mean.Sepal.Length = mean(Sepal.Length, na.rm=T),
                                        SD.Sepal.Length = sd(Sepal.Length, na.rm=T))  %>% as.data.frame
```

```
##             Class Min.Sepal.Length Max.Sepal.Length Mean.Sepal.Length
## 1     Iris-setosa              4.3              5.8             5.006
## 2 Iris-versicolor              4.9              7.0             5.936
## 3  Iris-virginica              4.9              7.9             6.588
##   SD.Sepal.Length
## 1       0.3524897
## 2       0.5161711
## 3       0.6358796
```
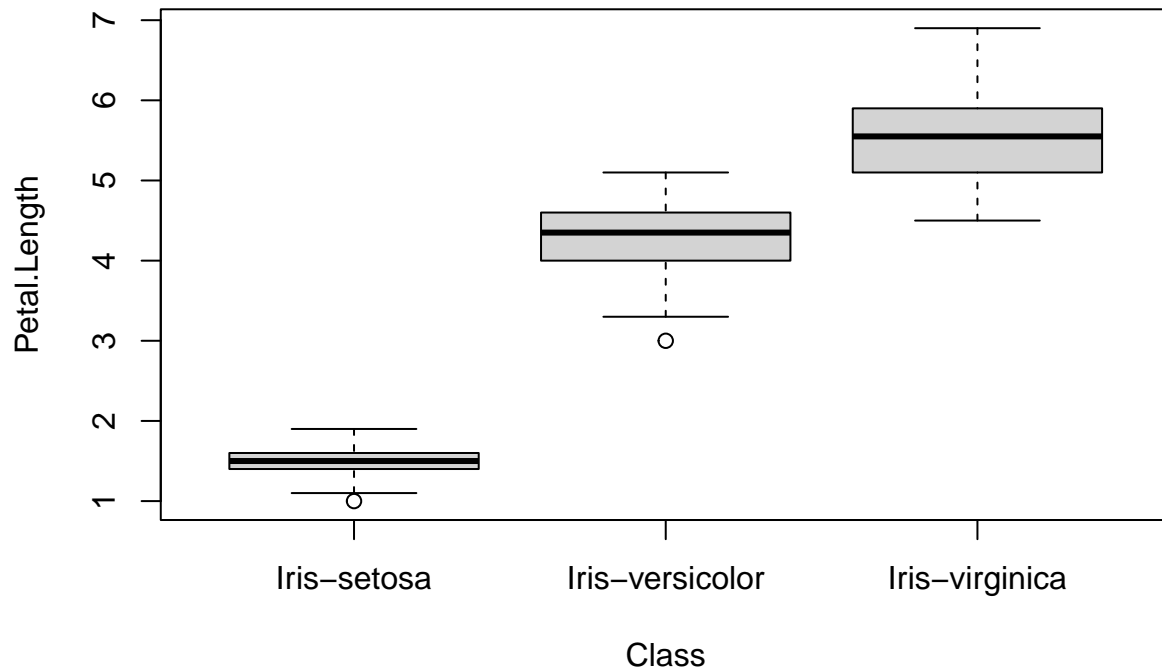

```
boxplot(Sepal.Length ~ Class, data = iris)
```

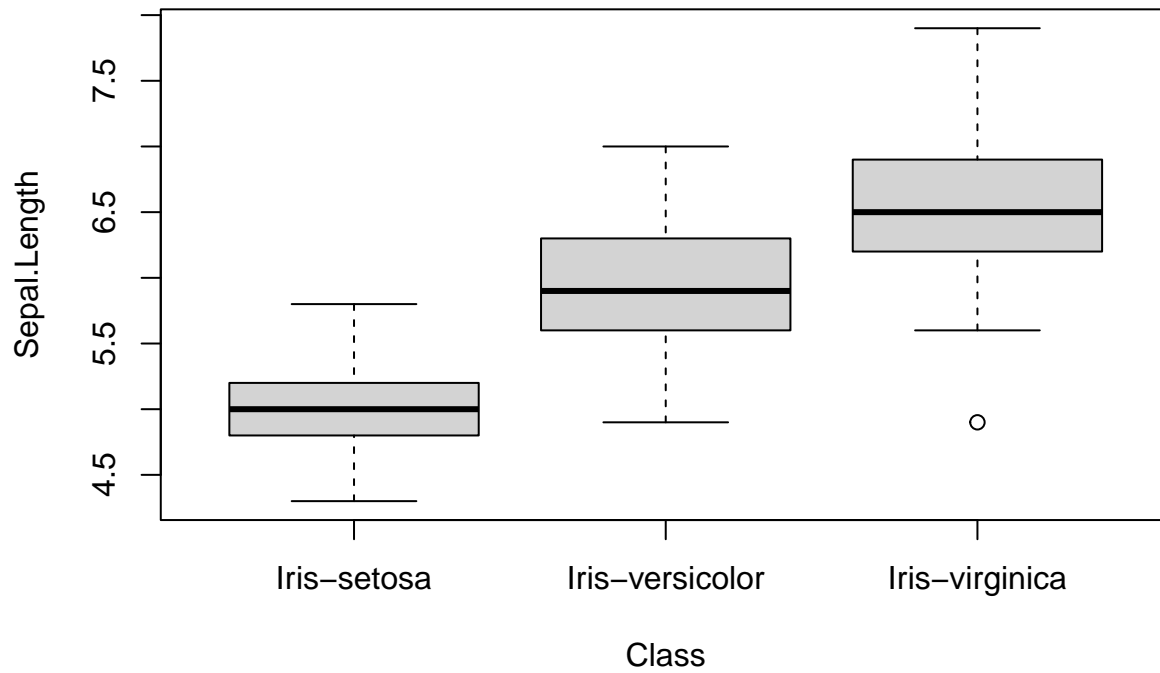

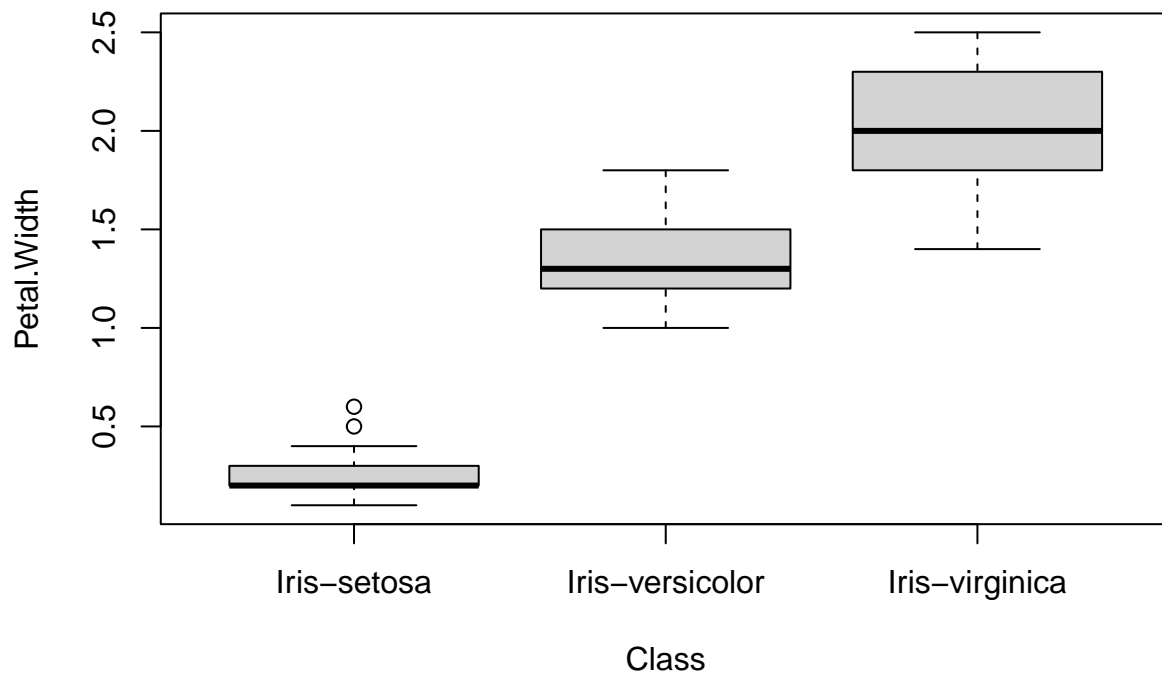

```
boxplot(Sepal.Width ~ Class, data = iris)
```

```
boxplot(Petal.Length ~ Class, data = iris)
```

```
boxplot(Petal.Width ~ Class, data = iris)
```

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
